

WHAT WE DO

For LCA members

We aim to help you, as LCA members, digitise, automate and optimise the way you perform your clients' risk assessments and manage their Legionella control & prevention processes. Our one-stop shop provides you with everything you need to save time and money.

For duty holders

For duty holders, our goal is to provide an all-in solution for all your buildings (risk assessments, digital logbooks and control measures), ensuring you remain L8- and HSG274-compliant. Our dashboards provide real-time insights and maintain all your documents in compliance with statutory requirements before archiving them.

HOW WE OPERATE

LegionellaDossier works exclusively with LCA-certified organisations so that duty holders are assured the highest possible service levels. Drop us a line today or book a free online demo to find out more about becoming a partner or using LegionellaDossier's software.

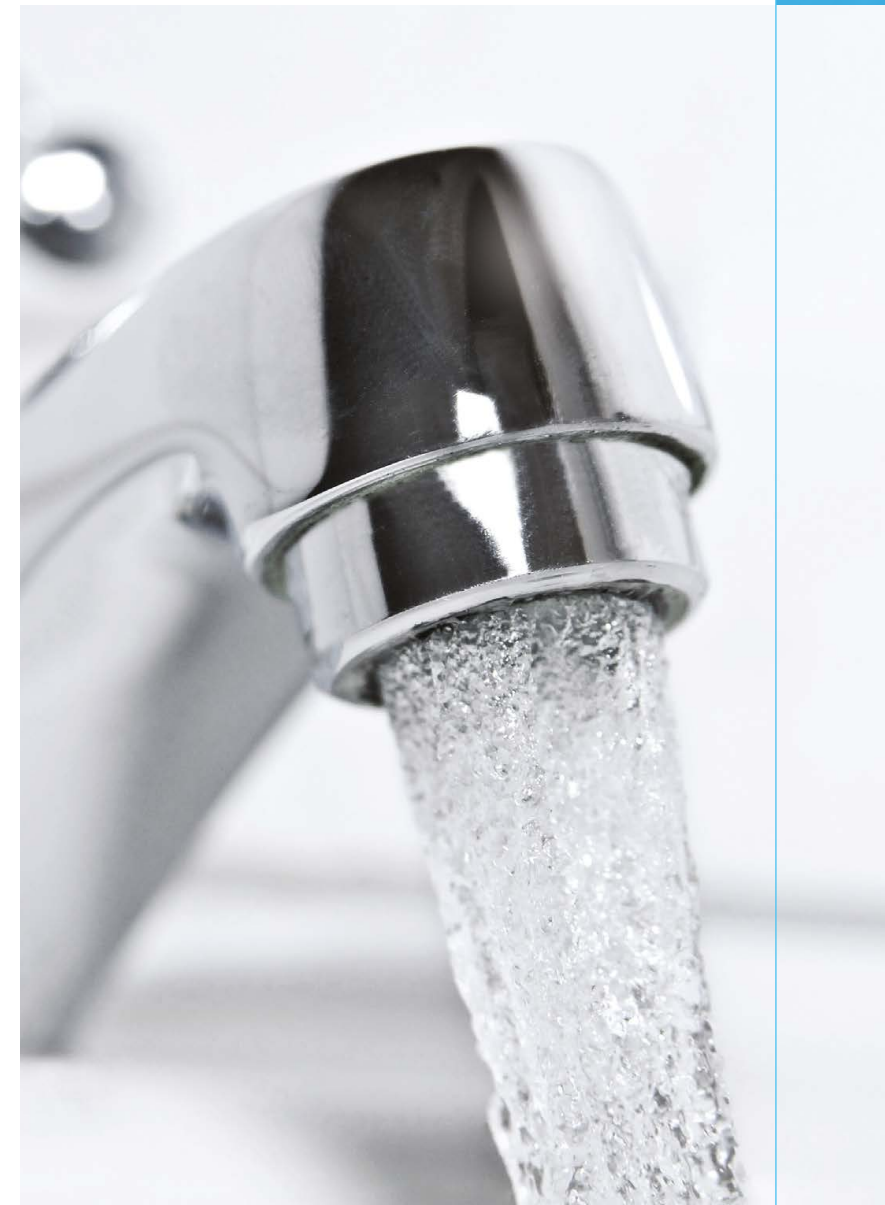

AND WHAT'S IN IT FOR YOU AS A PARTNER

Using our smart software solution gives you a head start and a competitive advantage in the UK market. By optimising your clients' Legionella control processes still further, you'll be able to increase annual recurring revenues and provide an even higher level of service.

Did you know ...

- you save up to 50% of your assessors' time with our risk assessment software?
- you'll have new ways to help your clients with our digital logbook, boosting your recurring revenue?
- you can automate tasks, such as flushing pipes and recording temperatures, with our smart sensors?

Our goal is to develop the best Legionella control software in the world, together with Legionella experts like you.

BECOME A PARTNER TODAY!

1. SAVE TIME WITH OUR RISK ASSESSMENTS SOFTWARE

Perform your digital risk assessments up to 50% faster:

- Improve your risk assessor's efficiency
- Eliminate time-consuming paperwork
- Make information more widely accessible

How do digital, on-site risk assessments work?

You don't always have a good internet connection when on site. Sometimes, you have none. This is why we designed our **LD-Inspect** app to work offline so you can perform risk assessments any time, any place, anywhere.

Using our app, you can assess all your assets quickly and easily by answering a series of questions relevant to each item, for example, what's your water heater's capacity, what's the anticipated ambient temperature or are your pipes insulated?

You can even take photos and temperature readings from within the app using your device's camera and a Bluetooth thermometer.

To save you even more time, we've also added several other smart features to the app:

- Duplicate rooms with a tap of your screen, eliminating repetition
- Append photos to systems or outlets for easier identification
- Take temperature readings easily and accurately with a Bluetooth thermometer

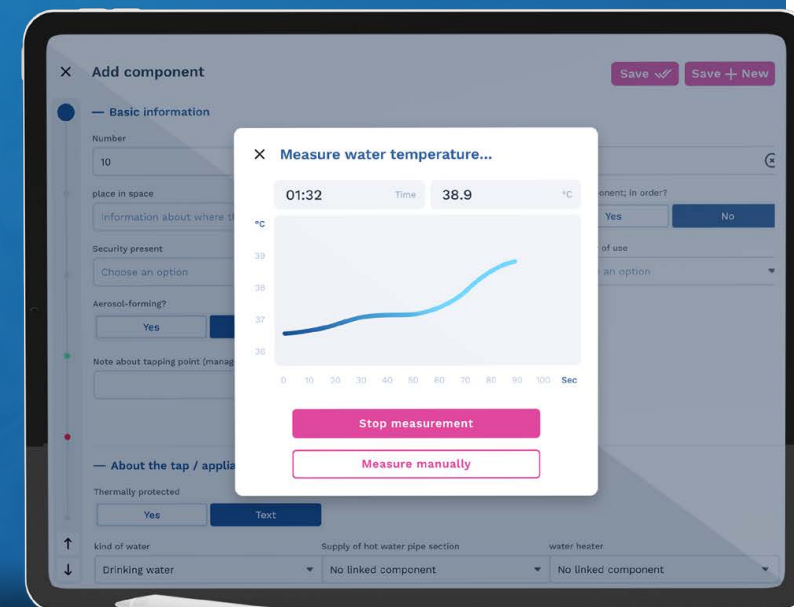

Generate your on-site risk assessment with a tap of the screen

Once you've completed your risk assessment, simply tap the screen to generate your L8- and HSG274-compliant risk assessment report, action plan and logbook – ready for you to send to your client.

You can even customise your risk assessments using templates that allow you to include your logo, branding or wording without the need to cut and paste from Word and/or Excel files. All this in just a few minutes so you can put vital information in the hands of the people who need it.

Update & sync – any time, any place, anywhere

Any time you make a change, our system updates and syncs everything for you in a matter of minutes. Suppose you remove a water outlet. All your logbooks, asset registers and technical recommendations will reflect this change automatically, eliminating the need for you to amend everything manually and freeing you up to do other work.

2. TAKE FULL CONTROL WITH OUR LEGIONELLA CONTROL SOFTWARE

Legionella prevention & control is a complex field, involving labour-intensive procedures, time-consuming paperwork and repetitive tasks, such as flushing pipes and taking temperature readings. That's why we developed **LD-Control** – an all-in-one digital logbook for all your buildings to help you and your clients maintain documents and perform tasks while remaining fully L8 and HSG274 compliant.

Take advantage of LD Control to:

- Keep all your documents, schematics and certificates up to date and in one central location
- Generate complete logbooks with a click of a button
- Work more closely with your clients

Make it quicker & easier for everyone involved

Our offline app eliminates the hassle of hard copy logbooks for evermore. It also provides clear, concise instructions for performing tasks and works in conjunction with a Bluetooth thermometer to ensure you take correct and accurate readings.

What's more, it even checks off tasks automatically in your digital logbook as you complete them, giving duty holders real-time insights and clear, actionable management data.

In short, LD-Control gives you full control of your Legionella prevention measures and even provides step-by-step instructions for anyone to perform on your behalf.

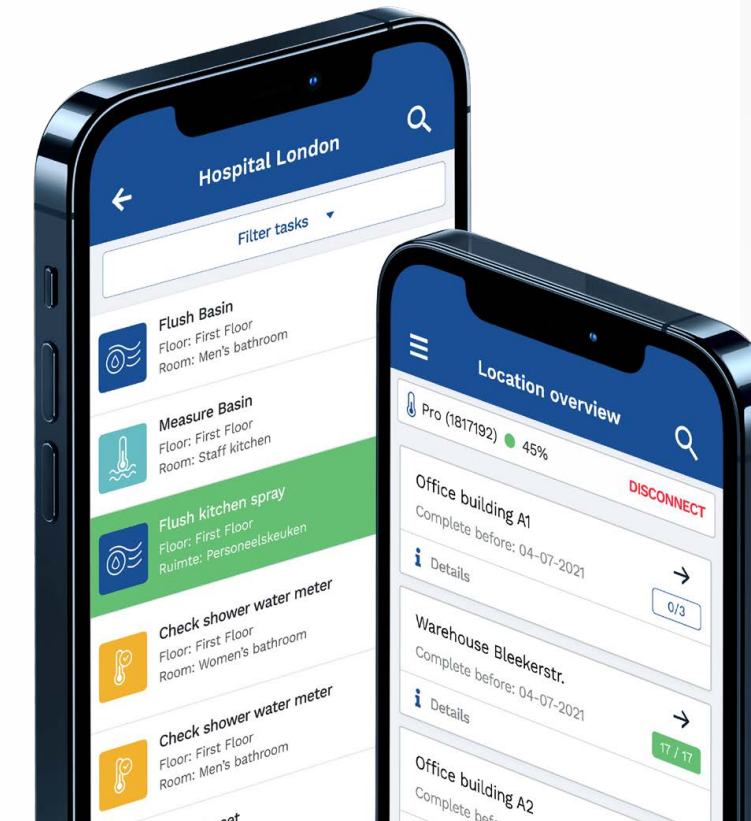

Receive automatic task notifications & reminders

Using our app, you can schedule and assign tasks to your staff so that only relevant and current action items show up on their devices. And notifications and reminders ensure staff never miss a task. Nonetheless, we've put fallbacks in place in case they do, for example by reassigning tasks to other available staff members.

What's more, our system automatically prompts you or the person responsible to take action if a non-compliance arises or a user enters a comment or a request for action or follow-up.

Get real-time insights with our smart dashboards

Our smart dashboards keep you fully up to date, displaying tasks completed, active non-compliances and much, much more. They even allow you to zoom in on management data, detect trends and improve your Legionella control & prevention measures.

3. SOLVE YOUR MONITORING CHALLENGES WITH IOT SENSORS

Say hello to Clip'R – your smart IoT temperature sensor

Clip'R – our wireless, digital temperature sensor – transmits its data to our software for verification against L8, HSG274 and any other relevant health & safety guidelines.

Save time & effort with Clip'R sensors

It doesn't get much easier than this. Using our Clip'R sensors and software, you can perform, record and archive all your Legionella prevention tasks automatically:

- Flushing pipes
- Taking temperature readings
- Generating tasks for vacant rooms

LD-Control analyses all the data to make sure that you perform tasks correctly and your buildings remain safe and compliant.

By checking off automated tasks, once completed, our software not only saves you and your staff time and unnecessary effort but also gives you peace of mind, knowing Clip'R has everything under control. Our system even updates your logbooks for you, keeping you fully up to date and compliant with real-time insights.

Rest assured that all is complete & correct

Clip'R monitors water usage and records temperatures inside pipes accurately and correctly, making it even easier for the person responsible to manage your Legionella control processes.

What's more, Clip'R also notifies the person responsible about any manual tasks they should perform whenever it detects zero usage over a pre-defined period.

Never miss a non-compliance

Clip'R monitors and records temperatures without missing a single non-compliance, as often happens when taking temperature readings manually. You can set custom alert thresholds and have notifications forwarded automatically to the person responsible so they can take immediate action and keep your buildings' water systems safe.
